DonRiver Amdocs OSS Data Migration project achieves over 99% data accuracy

DonRiver helps Australian Tier 1 Carrier Achieve over 99% data accuracy in massive Amdocs Cramer OSS Data Migration

Melbourne, Australia — DonRiver, a global Amdocs OSS services consulting and technology company has helped the leading Tier 1 Telecommunications Carrier in Australia successfully migrate its HFC network data to the Amdocs OSS Inventory Platform (previously Cramer) with near perfect results.

The migration of the HFC network data represents a key component of an enterprise-wide program that impacted a large number of OSS and BSS systems. In order to minimize operational impact, our client requested DonRiver develop a data migration solution to address the specific volumetric and data integrity requirements of the program. The bespoke data migration solution delivered by DonRiver resulted in the successful migration of over 100 million records from multiple legacy systems into Amdocs OSS Resource Manager in less than 48 hours. The data included the Australian Carrier's HFC Network together with Pay TV, FTTP and Satellite Serviceability information.

This is DonRiver's third major Amdocs OSS migration in the past 2 years that has resulted in a successful migration rate exceeding 99.999% of source data. "We assembled a world-class team and achieved world-class results in what must rank as one of the largest and most successful Amdocs OSS data migrations in APAC, if not globally" said John McVey, executive Principal at DonRiver.

The migration was a critical enabler for the Tier 1 Carrier to launch a new strategic BSS / OSS solution for Cable and Pay TV Service Qualification and Fulfillment. According to Mr. McVey, "DonRiver was able to deliver a customized Amdocs OSS migration platform that placed emphasis on reliability and performance to minimize production outages."

Since 2006, DonRiver has been providing the tier 1 Australian carrier with Amdocs OSS services including consulting, software development and data

migration. In mid-2008, DonRiver successfully migrated its IP/MPLS Core network into Cramer with a near perfect success rate.

About DonRiver

DonRiver is a global consulting and technology services company specializing in providing next generation solutions in the Communications industry (OSS/BSS), globally. We pride ourselves on being able to combine the best expertise in the market with world-class delivery capability that fundamentally changes the way our clients operate.
